

convention: do use the same name for methods in different classes that do the same thing — or, even in the same class

Example of loop that does nothing:

```
for (int i=0; i<10; i++);
```

within Java, a "block" of statements is a unit.

```
{
```

... statements.

```
}
```

important for beginners to use braces in loops and conditionals

loops: for, while, do

conditionals: if, else
