

only one tested

int indexOf(String s)
- returns first occurrence of s in the string (position), -1 if s is not found

int indexOf(String s, int fromPos)
- same, but starts at position fromPos.
(returns index within s as a whole)

int lastIndexOf
(String s)

int lastIndexOf
(String s, int fromPos)

String trim()

- removes leading blanks and trailing blanks from a String

" _ _ _ some _ words _ _ _ "

```
String s = "I knew the name of the author of \"The Good Earth\".";
s
"I knew the name of the author of \"The Good Earth\"." (String)
s.indexOf("the")
7 (int)
s.indexOf("the",7)
7 (int)
s.indexOf("the",8)
19 (int)
s.indexOf("the",20)
-1 (int)
s.indexOf("The",20)
34 (int)
s.indexOf("The")
34 (int)
String s1 = "   some words   ";
s1.trim()
"some words" (String)
```
